Fill in the blank squares so that each row, each column and each 3-by-3 block contain all of the digits 1 thru 9.

The dotted lines indicate areas which also contain a non-repeating set of digits. These squares can be added together to produce the sums shown in the clues.

Be sure to use the answers page if you get stuck!

The value of money has an objective regulator only when it is linked to a real commodity, like gold, and requires the cost of human labor to be paid for it. By contrast, the value of money, as a mere paper money, has no objective regulator, its marginal cost of production being nearly zero.
— Lewis E. Lehrman

INSTRUCTIONS: These hint grids reveal the order in which the squares were solved by my computer. It's not necessarily the same order you would use, but it's probably close. Follow the numbered squares in order 1, 2, 3... until you find a square you haven't solved yet. This square (or the one or two immediately after it) is a good candidate to solve next.
