Fill in the blank squares so that each row, each column and each 3-by-3 block contain all of the digits 1 thru 9.

The dotted lines indicate areas which also contain a non-repeating set of digits. These squares can be added together to produce the sums shown in the clues.

Be sure to use the answers page if you get stuck!

Pascoli:
A programming language named after a man who would turn over in his grave if he knew about it.

A put that stops close enough to the cup to inspire such comments as "you could blow it in" may be blown in. This rule does not apply if the ball is more than three inches from the hole, because no one wants to make a travesty of the game.
-- Donald A. Metz

INSTRUCTIONS: These hint grids reveal the order in which the squares were solved by my computer. It's not necessarily the same order you would use, but it's probably close. Follow the numbered squares in order 1, 2, 3, ... until you find a square you haven't solved yet. This square (or the one or two immediately after it) is a good candidate to solve next.
