Fill in the blank squares so that each row, each column and each 3-by-3 block contain all of the digits 1 thru 9.

The dotted lines indicate areas which also contain a non-repeating set of digits. These squares can be added together to produce the sums shown in the clues.

Be sure to use the answers page if you get stuck!

*Autocracy is based on the assumption that one man is wiser than a million men. Let's play that one over again, too. Who decides?
-- Lazarus Long*

*Of all the words of witch's doom,
There's none so bad as which and whom.
The man who kills both which and whom,
Will be enshrined in our Who's Whom.
-- Fletcher Knebel*

Real computer scientists despise the idea of actual hardware. Hardware has limitations, software doesn't. It's a real shame that Turing machines are so poor at I/O.

INSTRUCTIONS: These hint grids reveal the order in which the squares were solved by my computer. It's not necessarily the same order you would use, but it's probably close. Follow the numbered squares in order 1,2,3,... until you find a square you haven't solved yet. This square (or the one or two immediately after it) is a good candidate to solve next.
