Fill in the blank squares so that each row, each column and each 3-by-3 block contain all of the digits 1 thru 9.

The dotted lines indicate areas which also contain a non-repeating set of digits. These squares can be added together to produce the sums shown in the clues.

Be sure to use the answers page if you get stuck!

As long as men are free to ask what they must -- free to say what they think --
 free to think what they will -- freedom can never be lost and science can never
 regress.
 -- J. Robert Oppenheimer

Those who profess to favor freedom, and yet depreciate agitation, are men who want vain rain without thunder and lightning. They want the ocean without the roar of its many waters.
 -- Frederick Douglass

The total amount of evil in any system remains constant. Hence, any diminution in one direction -- for instance a reduction in poverty or unemployment -- is accompanied by an increase in another, e. g., crime or air pollution.
 -- Professor Charles P. Issawi

When some English moralists write about the importance of having character, they appear to mean only the importance of having a dull character. -- G. K. Chesterton

That, Sir, is the good of counting. It brings everything to a certainty, which before floated in the mind indefinitely. -- Samuel Johnson

INSTRUCTIONS: These hint grids reveal the order in which the squares were solved by my computer. It's not necessarily the same order you would use, but it's probably close. Follow the numbered squares in order 1, 2, 3, ... until you find a square you haven't solved yet. This square (or the one or two immediately after it) is a good candidate to solve next.
