Fill in the blank squares so that each row, each column and each 3-by-3 block contain all of the digits 1 thru 9.

The dotted lines indicate areas which also contain a non-repeating set of digits. These squares can be added together to produce the sums shown in the clues.

Be sure to use the answers page if you get stuck!

Atoms are made up of electrons and protons (protons are also neutrons). Fifty billion electrons piled side by side in a straight line would stretch across the space. Such an idea is incapable of being absorbed by the human mind.
 --John Lardner and Thomas Stryer

What manly eloquence could produce such an effect as woman's silence.
 --Michelet

INSTRUCTIONS: These hint grids reveal the order in which the squares were solved by my computer. It's not necessarily the same order you used to solve the puzzle. Follow the numbered squares in order 1, 2, 3 until you find a square you haven't solved yet. This square (or the one or two immediately after it) is a good candidate to solve next.
