Fill in the blank squares so that each row, each column and each 3-by-3 block contain all of the digits 1 thru 9.

The dotted lines indicate areas which also contain a non-repeating set of digits. These squares can be added together to produce the sums shown in the clues.

Be sure to use the answers page if you get stuck!

Atoms are made up of electrons and protons (protons are also nothing). Fifty billion electrons placed side by side in a straight line would stretch across the period at the end of this sentence. Protons are heavier but take up less space. Such an idea is incapable of being absorbed by the human mind.  
 -- John Larner and Thomas Segrave

What manly eloquence could produce such an effect as woman's silence.  
 -- Mithelct

INSTRUCTIONS: These hint grids reveal the order in which the squares were solved by my computer. It's not necessarily the same order you would use, but it's probably close. Follow the numbered squares in order 1, 2, 3, ... until you find a square you haven't solved yet. This square (or the one or two immediately after it) is a good candidate to solve next.
