Fill in the blank squares so that each row, each column and each 3-by-3 block contain all of the digits 1 thru 9.

The dotted lines indicate areas which also contain a non-repeating set of digits. These squares can be added together to produce the sums shown in the clues.

Be sure to use the answers page if you get stuck!

When the Nguni tribe of West Africa hold their moon love ceremonies,
 the men of the tribe bring their heads on silver poles until they get a
 good view of the place which usually lies hidden in the bush.
 -- Mike Harding, "The Armchair Adventurer's Almanac"

Real computer scientists don't write code. They occasionally tinker with programming systems, but those are so high level that they hardly count (and rarely, precision is for applications.)

INSTRUCTIONS: These hint grids reveal the order in which the squares were solved by my computer. It's not necessarily the same order you would use, but it's probably close. Follow the numbered squares in order 1, 2, 3... until you find a square you haven't solved yet. This square (or the one or two immediately after it) is a good candidate to solve next.
