Fill in the blank squares so that each row, each column and each 3-by-3 block contain all of the digits 1 thru 9.

The dotted lines indicate areas which also contain a non-repeating set of digits. These squares can be added together to produce the sums shown in the clues.

Be sure to use the answers page if you get stuck!

*O: How many surrealists does it take to change a light bulb?
A: Two. One to hold the struggle and the other to fill the bulb
with brightly colored machine tools.*

*Inventing is easy for stiff outfits. Stating a problem is much harder.
Instead of stating problems, people like to pass out half-accurate statements
together with half-convincible solutions which they can't finish and which they
want you to finish.
-- Anthon Katz*

INSTRUCTIONS: These hint grids reveal the order in which the squares were solved by my computer. It's not necessarily the same order you would use, but it's probably close. Follow the numbered squares in order 1, 2, 3, ... until you find a square you haven't solved yet. This square (or the one or two immediately after it) is a good candidate to solve next.
