Fill in the blank squares so that each row, each column and each 3-by-3 block contain all of the digits 1 thru 9.

The dotted lines indicate areas which also contain a non-repeating set of digits. These squares can be added together to produce the sums shown in the clues.

Be sure to use the answers page if you get stuck!

The day-to-day travails of the IBM programmer are so amusing to most of us who are fortunate enough never to have been one -- like watching Charlie Chaplin trying to cook a shoe.

Bedfellows make strange politicians.

Who purposely cheats his friend, would cheat his God.
-- Lavater

There is a tide in the affairs of men, Which, taken at the flood, leads on to fortune: Omitted, all the voyage of their life Is bound in shallows and in miseries: On such a full sea are we now afloat, And we must take the current when it serves, Or lose our ventures.
-- Shakespeare

INSTRUCTIONS: These hint grids reveal the order in which the squares were solved by my computer. It's not necessarily the same order you would use, but it's probably close. Follow the numbered squares in order 1, 2, 3, ... until you find a square you haven't solved yet. This square (or the one or two immediately after it) is a good candidate to solve next.
