Fill in the blank squares so that each row, each column and each 3-by-3 block contain all of the digits 1 thru 9.

If you use logic you can solve the puzzle without guesswork.

Need a little help? The hints page shows a logical order to solve the puzzle. Use it to identify the next square you should solve. Or use the answers page if you really get stuck.

If you put tomfoolery into a computer, nothing comes out but tomfoolery. But
 this tomfoolery, having passed through a very expensive machine, is somehow
 embolded, and no one dares to criticize it.
 -- Pierre Gallois

VIRTUAL MEMORY: Memory that exists in effect, but not in fact; the usage is similar to that of the virtual particle in physics, the difference being that a virtual particle probably does exist but soon won't, while virtual memory probably doesn't but soon will.

*You can take a horticulture, but you can't make her think.
-- Dorothy Parker*

The biggest step you can take is the one you take when you meet the other person halfway.

Since no matter can be created or destroyed (excluding nuclear and cafeteria substances), as one attempts to remove unwanted material (i. e., trash) from one's living space, the remaining material migrates so as to occupy 30 to 50 percent more than its original volume.

INSTRUCTIONS: These hint grids reveal the order in which the squares were solved by my computer. It's not necessarily the same order you would use, but it's probably close. Follow the numbered squares in order 1,2,3... until you find a square you haven't solved yet. This square (or the one or two immediately after it) is a good candidate to solve next.
